Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S. No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA

5	Environment configuration file (.env.example similar)	NA
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
__# 🗁 Project Structure

``` Wellbeing Predictor |

├── app.py

├── train.py

├── requirements.txt |

├── data |  ├── hdi.csv | └── hdi_clean.csv |

├── model |  ├── hdi_model.pkl | └── metrics.pkl |

├── templates | └── dashboard.html |

├── static |  ├── style.css |  ├── dashboard.js | └── images |

└── README.md
```

Step 3: Deployment / Access Details

Field	Details
Login Credentials (Demo)	
Platform / Hosting Provider	Localhost/Render/Vercel/Netlify/PythonAnywhere/GitHub Pages
```

Demo Video Link	https://drive.google.com/file/d/1Uy8YM-SIe8NwPd4YCSa0E6eF50t58NOd/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Step 5: Known Issues / Limitations

S. No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and completeness of the input data.	Use clean, valid, and updated data to improve prediction accuracy.
2	The model is trained on a limited dataset and may not generalize well to unseen data.	Retrain the model periodically with a larger and more diverse dataset.
3	The application requires a Python environment with all required libraries installed.	Install all dependencies using requirements.txt before running the project.
